

**IN THE CLAIMS:**

Claims 1-12 (canceled)

71/ 13. (currently amended) A solid or ~~semi-solid~~ pharmaceutical composition comprising at least two phases, wherein one phase forms a matrix which consists essentially of one or more components selected from the group consisting of homo- or copolymer of N-vinylpyrrolidone, cellulose ether, hydroxyalkylcellulose, cellulose esters and an acrylate- or methacrylate containing polymer and which contains at least one pharmaceutically active ingredient in the form of a solid solution and at least one other phase containing at least one active ingredient and an additive is homogeneously incorporated in the form of particles into the matrix phase.

14. (currently amended) The composition as claimed in claim 13, wherein said particles are in the form of crystals, pellets, microtablets or granules.

15. (currently amended) The composition as claimed in claim 13, wherein a flavoring is present in the matrix phase.

16. (currently amended) The composition as claimed in claim 13, which is obtained by incorporating the particles of said other phase into the matrix phase during or after plasticization and shaping the material while still plastic.

17. (withdrawn) A process for producing the pharmaceutical composition of claim 1 which comprises plasticizing a mixture of components of the matrix phase by energy input, incorporating the particles of at least one other phase homogeneously into the matrix phase during or after plasticization, and subsequently shaping the material while still plastic.
